

A New Approach in the Bogo-Indian

by Dejan Antic

2. c4 e6
3. ♗f3 ♙b4
4. ♖bd2 0-0
5. a3 ♙e7
6. e4 d5

An opening that has increasingly attracted the attention of top grandmasters recently is the Bogo-Indian Defence. Even though it looks pretty passive, some pretty active ideas for Black have been found of late. I have also had the chance to play a few games with this opening in which I felt pretty comfortable and scored solid results.

Fast Development

The basic idea for Black in the line given above is fast development, even though White has full control of the centre. Advantages for Black are the bad position of the knight on d2 and the fact that he will be able to fight for the centre with the move ...c5. I think Black will get satisfactory positions in all variations. The

modern treatment of this position is to temporarily sacrifice the pawn on c5 in order to gain some other positional advantages. The main game we will analyse is Koneru-Antic, in which I improved on the game Gelfand-Bocharov.

Maintaining the Tension I

7. ♖c2 is the most popular continuation for White. If Black gives up the centre with 7...de4 8. ♗e4 ♗e4 9. ♖e4, White can put his bishop on d3, posing a serious threat to Black's king. But the new approach in this position, with the temporary pawn sacrifice on c5, shows that Black has an excellent continuation (see the game Koneru-Antic). White can seize space with e4-e5, followed by ♙d3, but that position is very similar to the one in which White has played 7. ♖c2. We will see that Black has an excellent position with good counterplay.

Maintaining the Tension II

7. ♙d3 is an interesting option with which White wants to reach an endgame with a space advantage. In the game Gelfand-Ivanchuk, instead of the usual move 11... ♙c5, with some technical problems in the endgame, Black played 11...a5!, which neutralized White's initiative in the endgame. Another option for White, 8.e5, seizing space in the

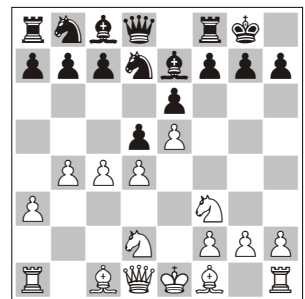

David Berczes

centre, also gives Black excellent counterplay.

Seizing Space

At this point it looks as if 7.e5, with the idea of 8.b4, gives White the best possibilities to complicate the game.

But I believe that Black has a satisfactory position here. White's most dangerous plan is to quickly build up pressure on the

b1-h7 diagonal with ♖c2 and ♕d3. A very interesting game, in which Black showed how the position should be defended, is Berczes-Saric. White's other options are less dangerous, as we will see it in the material presented here. The game Livner-Antic is a good example.

Conclusion

In modern chess it is very difficult to give definitions of and draw conclusions about certain positions. I feel that this line gives Black good counterplay, and I suggest you try and play this system. Practical games are very important for the develop-

ment of any variation, and this also goes for the present one. In the meantime, we will wait for the answers white players are going to come up with, especially at top level. I hope the reader will enjoy the material presented here.
